

APPLICATIONS

Electrical wiring • Electronics • Automotive • Renewable Energy • Oil & Gas

Copper Plating Process

Our electrolytic copper plating process creates an outstanding barrier to prevent components of the base material from migrating into the subsequent plating layers. Copper plating can be used independently or as an undercoating for additional coatings such as nickel to enhance corrosion resistance.

Copper is a soft and malleable metal, so it is an excellent choice for electroplating with other flexible metal materials. Copper also has outstanding conductive properties making it essential in electronics applications.

SPECIFICATIONS

AMS 2418 • MIL-C-14550

CAPABILITIES & RELATED SERVICES

- Rack and Barrel (bulk) plating
- Stripping
- Tumbling
- Blasting
- Packaging
- Masking

COMMON SUBSTRATES

- Steel
- Zinc die cast
- Stainless steel
